## WORKING PAPERS

Moskaleva, E. [**Job Market Paper**] “Impacts of Youth Migration on the Livelihood of Households Left Behind: Evidence from Tanzania”

**Abstract.** This paper determines how the departure of an adult child affects the household’s reallocation of labor and livelihoods. The study is motivated by growing out-migration of young adults and the need to identify actions to alleviate the effects of potential labor shortages in rural areas. This requires an improved understanding of the strategies utilized by parents and siblings of the migrant to adjust to potential shortages in labor supplied to the farm and other activities. The main outcome of interest is the change in individual labor supplied by different household members. I observe young men to replace migrant’s labor provided to the household farm and other production, a decrease in farm area, and a drop in hired labor. At the same time, migrant-sending households tend to attract new household members through marriage, return migration, and extended family ties.
